

Colorectal Cancer Screening

CELEBRATING 50 YEARS OF TRIBAL NATION UNITY 1969-2019

Colorectal Cancer Screening Measure Logic

1. User population patients ages 50 through 75 without a documented history of colorectal cancer or total colectomy
2. Patients who have had any colorectal cancer screening, defined as any of the following:
 - Fecal Occult Blood Test (FOBT) or FIT during the report period
 - Flexible sigmoidoscopy or CT colonography in the past 5 years
 - Colonoscopy in the past 10 years
 - FIT-DNA in the past 3 years
